Who we are

CLINICAL CARE OPTIONS®

A global leader in the development of innovative, interactive, online, and live CME/CE-certified continuing education programs and proprietary medical education technologies for healthcare professionals

*in*Practice®

Launched in 2009, *inPractice*® is a continually updated point-of-care clinical reference tool that can also be used for structured learning. Available for multiple therapeutic areas: HIV; oncology; oncology nursing; rheumatology; viral hepatitis

*in*Practice® Africa 
Information *in*time | Education *in*depth

Launched in April 2013, a version of *inPractice* developed specifically for use in resource-constrained settings, with unique technology and content features

Challenges in medical education in resource-constrained settings

- In settings where the Internet is unavailable, unreliable, and/or costly, clinicians are deprived of digital tools
- Even in resource-constrained settings (RCS) that do have Internet access, most digital medical resources do not reflect the realities of those settings (eg, diagnostics, treatments, equipment, personnel)
- Consequently, much medical education in RCS comprises in-person training sessions
 - Requires thinly stretched clinicians to travel lengthy distances and be absent for multiple days from the patients who require their care.
- In addition, many resources are produced in offline formats such as printed manuals, CD-ROMs, or PowerPoint slidesets that cannot be updated when treatment options or guidelines change, so outdated information circulates long after it has become redundant.

Our response: *inPractice*® Africa

- Adaptation of *inPractice* to address the identified needs
- South African partners:
 - Foundation for Professional Development
 - University of the Witwatersrand
- Public-private alliance for grant support

inPractice® is supported by a Public-Private Alliance between the following funding agencies:

inPractice Africa: key features

- Web site adapted for low-bandwidth settings
- Offline as well as online functionality
- Use for structured education or to search for info at the point of care
- 3 new curricula created with South African faculty
 - Applying national guidelines on antiretroviral therapy (10 modules)
 - TB in HIV-infected patients (5 modules)
 - Nursing care for HIV (10 modules)
- Reference database of HIV and TB drugs used in South Africa
- Full-text South African and WHO practice guidelines
- South African CPD certification, plus certificates recognizing curriculum completion

Offline apps for Android, Apple, and Windows

- Available for Windows (XP and later) via CD-ROM as well as Android and Apple phones and tablets
- Installed once and can then be used everywhere, regardless of Internet availability
 - Includes full text of 25 modules, drug database, and guidelines
 - Interactive case studies and CPD tests can be taken offline
 - Multitenancy: multiple users can share the same device with their own “local account”
- If connected to Internet, content updates are downloaded, test results and participation metrics are uploaded for all users

Tracking and reporting

- Metrics recorded for each participant include
 - Number of visits
 - All searches
 - Responses to case vignettes within each module
 - CPD tests completed
 - Curriculum certificates earned
- Can be used for basic assessment of educational gaps
- Provides data required for countries that are formalizing their accreditation process and allows reporting of progress to the MOH and other bodies

Welcome

inPractice® Africa is a continually updated reference and learning resource for South African clinicians, available both online and offline.

The program provides continuing professional development certificate programs, practice guidelines, and drug reference information, as well as referral clinical support. inPractice® Africa is also available as downloadable apps for tablets, smartphones, and Windows PCs

How It Works

inPractice® Africa content can be accessed in 2 ways:

- Easy-to-search point-of-care reference information as you treat your patients
- Review complete modules and earn credit

Accredited curricula offered through inPractice® Africa consist of learning modules to complete in any order, and when all are successfully completed you receive your program certificate. CPD credit is also offered for each learning module.

Certification Programs

- ▶ **Applying South Africa National Guidelines on Antiretroviral Therapy**
 Comprehensive 10-chapter curriculum on the use of antiretroviral therapy in South Africa:
 - ▶ Identify and prepare patients for treatment, recommended regimens, monitoring treatment, managing adverse effects, treatment failure, and considerations in specific populations including women, children, and patients with advanced disease.
- ▶ **Management of Tuberculosis in HIV-Coinfected Patients**
 5 chapters detailing:
 - ▶ The prevention, diagnosis, and treatment of drug-sensitive and drug-resistant tuberculosis in HIV-infected patients in South Africa.
- ▶ **Nursing Care of HIV-Infected Patients**
 A 10-chapter comprehensive curriculum designed to:
 - ▶ Provide nurses and nurse managers with guidance on diverse aspects of HIV care, including models of service delivery, management of antiretroviral therapy, and on treatment considerations such as adverse events, adherence, and care of

The screenshot shows the desktop application interface. At the top, there are navigation tabs: Home, Search, Browse, Certification, and Support. The 'Browse' tab is active. Below the tabs is a table with two columns: 'Program' and 'Module'. The 'Program' column lists various topics, and the 'Module' column lists sub-topics. The 'Considerations for Concurrent Treatment of Tuberculosis and HIV' module is highlighted in orange. The sub-topics listed under this module include: IRIS, Shared Adverse Events of Tuberculosis Treatment and Antiretroviral Therapy, Drug-Drug Interactions and Their Management, Optimal Timing of Antiretroviral Therapy Initiation in TB/HIV-Coinfected Patients, Receiving TB Treatment, Isoniazid Preventive Therapy, Adjunctive Steroids, Case Vignette 1, and Case Vignette 2.

The screenshot shows the mobile application interface. At the top, there is a search bar with the text 'Starting art'. Below the search bar, there are tabs for 'Programs', 'Drugs', and 'Guidelines'. The 'Programs' tab is active. Below the tabs, there is a list of search results. The first result is titled 'Considerations for Initiating ART at Up-Referral Sites...' and includes a brief description and bullet points for 'Program' and 'Module'. The second result is titled 'Criteria for Initiation of Antiretroviral Therapy...'. At the bottom of the screen, there is a navigation bar with icons for Home, Search, Browse, Certification, and Support.

inPractice[®] Africa at a Glance

The mission of the inPractice[®] Africa program is to provide physicians, nurses, and other healthcare professionals in both resource-rich and resource-constrained settings with relevant, practical training and certification to support and improve the existing healthcare infrastructure, clinician education, and patient outcomes. It is currently designed to support South African physicians and nurses in the management of HIV-infected and HIV/tuberculosis-coinfected patients.

Immediate Postnatal Care: Breast-feeding and Prophylactic Nevirapine

Prophylaxis for HIV infection (ie, interventions directed at preventing the infant from acquiring HIV) starts immediately after birth. The following steps should be taken within 1 hour of delivery (Management Guidelines for HIV-Positive Women)

- Infants born to HIV-infected women should receive skin-to-skin contact with their mothers, regardless of infant feeding choice.
- All infants should be **breastfed** (exclusive breastfeeding is recommended).
- HIV-exposed infants should receive nevirapine prophylaxis immediately after birth or very soon after (within a 72 hour window).
- After delivery and prior to discharge, a complete treatment plan should be developed for the mother-infant pair. ^[SA NDOH PMTCT] Ensure that the mother understands the planned course of treatment and that the road-to-health booklet (RTHB) is completed prior to discharge. Completion of the RTHB should include a record of prenatal HIV treatment and prophylaxis, maternal illnesses, any HIV prophylaxis received by the infant and the intended method of feeding. Should the mother/caregiver become concerned about an infant's health due to poor feeding, jaundice, or lethargy, they should be counselled to return to a health care facility immediately.

Table 1 includes the postnatal care provided to mother and infant from birth to 18 months of age. See subsequent sections of this chapter for a more complete discussion of infant care.

For more information on postnatal care for the HIV-infected mother, click here.

Nevirapine

Last Updated April 26, 2013

Trade Names

- Nevirapine: *Viramune, Aspen Nevirapine, Auro-Nevirapine, Cipla-Nevirapine, Adco-Nevirapine, Sonke Nevirapine;*
- Stavudine/lamivudine/nevirapine: *Triomune-30, Triomune-40*

Drug Classification

Nonnucleoside reverse transcriptase inhibitor antiretroviral.

Formulations

- Nevirapine: 200 mg tablets; 50 mg/5 mL suspension;
- Stavudine/lamivudine/nevirapine: 30/150/200 mg and 40/150/200 mg tablets

Indications and Pharmacology

Indication: treatment of HIV infection in combination with other antiretrovirals, reduction of perinatal transmission of HIV.

Mechanism of action*: binds directly to reverse transcriptase, which interferes with HIV viral RNA-dependent DNA polymerase inhibiting viral replication.

Pharmacokinetics: metabolized in the liver by CYP 3A4 and 2B6. CYP 3A4 and 2B6 inducer. Half life: 25-30 hours; autoinducer.

Dosage

Adult Dose: 200 mg once daily x 14 days, then 200 mg twice daily.

- Omit lead-in phase if patient is receiving rifampicin.†

Prevention of mother-to-child transmission: 200 mg to mother at onset of labour.

Use in Renal or Hepatic Insufficiency:

- No dose adjustments needed in renal insufficiency.*
- Use with caution in hepatic impairment or porphyria. Avoid if significant hepatic impairment or active hepatitis B or C.†

Use in Pregnancy and Breastfeeding: Category C. Excreted into breast milk. Safety in lactation not established.

Mobile Applications

Click on the links below to download your inPractice® Africa application.

Apps for phones and tablets

Installable versions can be used entirely offline. If they go online, updates are downloaded and usage metrics are uploaded

Take inPractice® Africa With You Everywhere You Go—Online or Offline!

Take tests, earn credit, reference drugs, and get clinical support in your clinical setting right from your smartphone, tablet, or PC. With each app you get:

- Point-of-care reference resources at your fingertips
- Regularly updated modules by and for South African clinicians
- 3 continuing professional development certificate programs
- Ability to take tests and earn credit in your clinical setting
- South African practice guidelines
- South African drug reference information
- Referral clinical support for clinicians

All inPractice® Africa apps offer the ability to operate when not connected to the Internet—in offline mode—allowing you to use almost all of the features of the application when not connected to the Internet.

Technical Support

Having trouble downloading the application? Forgot your user name and password? Email techhelp@inpracticeafrica.com to access technical support.

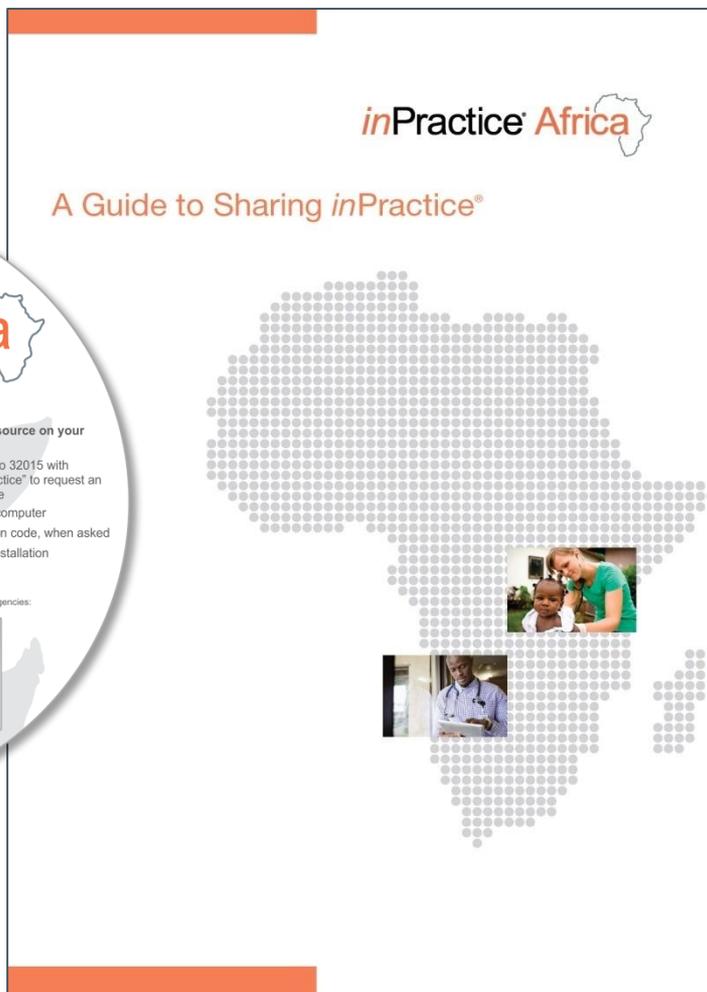

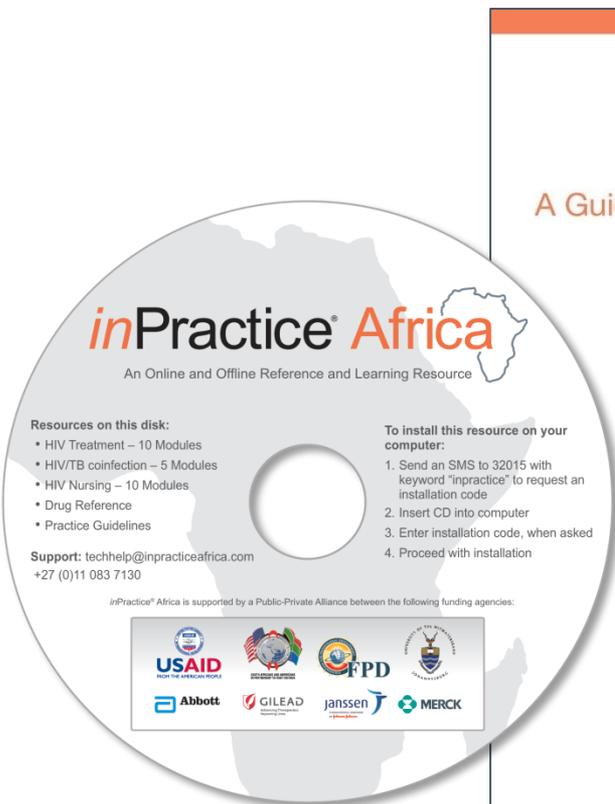

For inPractice Africa telephone assistance, please call +27 (0)11 083 7130. Our team will return your call in 24 hours.

Getting Started:

How to Access inPractice Africa

inPractice Africa is **free to access** and can be used with or without an Internet connection.

With an Internet connection, users can register online with inPractice Africa through the Web site or download the apps to install on iOS or Android devices or on Windows computers.

Without an Internet connection, users will need the CD-ROM Windows app installer and an installation code (requested and provided via SMS).

```

graph TD
    Start((inPractice Africa)) --> Web[Via web browser]

    CD1 --> CD2[Enter installation code into desktop installer.]
    CD2 --> CD3[Complete local account registration.]
    CD3 --> CD4[Sign using the program.]
    CD4 --> CD5[When you have Internet access, complete the inPractice Africa registration and request for an FPD student number if you do not already have one.]
    
```

Key notes on access: Multiple users may access inPractice Africa on the same device; each just needs to create a local account.

The program can be used both with and without an Internet connection, but an Internet connection is required for initial download of the iOS and Android apps, to upload user information to claim credits, and to download updates to the program.

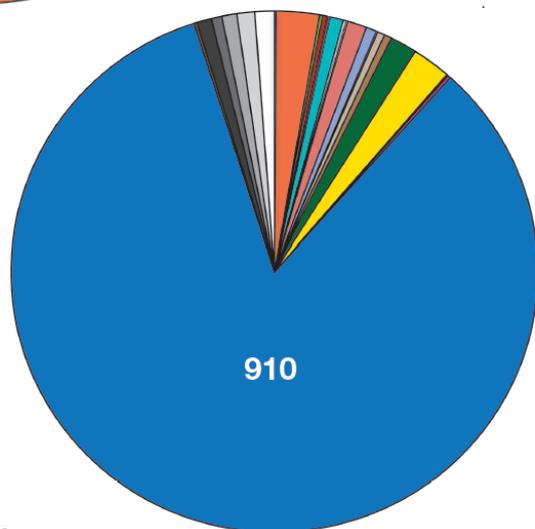

- The Windows app can be used without an Internet connection and requires only occasional Internet connectivity to complete information uploads/downloads.
- The iOS and Android apps require an Internet connection for initial download, but then only require occasional Internet connectivity to complete information uploads/downloads.
- When devices that normally use offline become connected to the Internet, user information (CPD credit information) is uploaded into the inPractice Africa system and any updates to the program content is downloaded to the device.

In 1 year:

- 2817 module credits were claimed
- 939 module certificates were earned
- 73 curriculum certificates were earned

Mobile Applications

Use of the Apple, Android, and Windows apps

- 140 unique users of the apps
- 719 unique visits via the apps
- 53 searches
- 171 questions answered

King E, et al. 20th International AIDS Conference. Abstract WEPE419.

Key learnings: Partnerships

- Outreach to clinicians on what the resource is and how to use it is critical
 - Need multiple avenues for reach and distribution
- Local partnerships are a key cornerstone to success
 - Academic oversight from Wits and involvement of leading South African authors and editors provides significant credibility
 - FPD brought a significant network of trainees for the program and offered many outlets for outreach and recruitment through their existing programs
 - SAHIVCS endorsed and recommended the program to their members and we set up accounts for them

Key learnings: Technology

- Users report that offline functionality is indeed critical to minimize real-world barriers to use
- Need to support multiple different platforms
 - At this conference, we have installed software for users on Windows, iPhone, iPad, Android phone, and Android tablets!
 - Users may need help in understanding their device itself (eg, how to install apps), not just in using the inPractice software
- Need to generate metrics, integrate with existing systems is essential but adds some complexity
 - eg, to track participation, users must set up an account and sign in
 - eg, to earn CPD credits, users must register with the provider

Conclusion

- Digital education can be successfully extended to resource-limited settings through technology that works both online and offline
- An appropriate technology platform can provide both structured training and a resource to enable clinicians to find answers to specific management questions at the point of care
- Partnerships with local organizations to provide distribution and training are essential to ensure effective engagement
- We are currently completing evaluation and final report to USAID
- Discussion ongoing with USAID and other funders/partners regarding program expansion within South Africa and new projects in other countries in Africa
