

Third-line antiretroviral therapy regimens

- Patient on second-line therapy for < 2 years with detectable VL: adherence counselling rather than a switch to a third-line regimen.
- Patient on second-line therapy for > 2 years with two or three detectable VLs within a 6-month period despite adherence interventions: perform resistance test.
- Choose regimen with HIV expert.

 $ART, antiretroviral\ therapy;\ DTG,\ dolute gravir;\ HIV,\ human\ immunode ficiency\ virus;\ PI,\ protease\ inhibitor;\ VL,\ viral\ load.$
